

## Classification Keys

Classification keys are used to sort living things according to their characteristics. They are made up of questions with a “yes” or “no” answer. Have a go at sorting these leaves using the classification key below to discover what tree they come from.

**Method:**

- 1 Choose a leaf to classify and start with the first question at the top of the classification key.
- 2 Follow the branches either “yes” or “no” and then ask yourself the next question.
- 3 When you have reached the last question, you will know what tree the leaf came from.
