Octopuses

What Do Octopuses Look Like?

Octopuses are boneless sea creatures with six arms, two legs and a large head. They have a sharp beak near to where their arms join. They have hundreds of suckers on each of their arms and legs which help them to taste. Octopuses are great at hiding. Octopuses can change the colour of their skin to talk to other octopuses, to hide and to hunt.

Octopuses have nine brains and are very clever. They have one main brain and one in each arm and leg. This means they can do lots of different things at the same time.

Did You Know...?

Octopuses have three hearts and blue blood!

Where Do Octopuses Live?

Octopuses live in all of the world's oceans. Some live in coral reefs near the surface while others live in underwater caves near the bottom of the ocean. Some even build their own dens out of rocks. They like to live and hunt on their own.

What Do Octopuses Eat?

Octopuses eat meat. They hunt for food like crabs and shrimp. They creep up on the creature and catch it with their strong arms. The octopus then bites the creature with its sharp, poisonous beak.

Did You Know...?

The octopus wolfi weighs less than a paperclip!

5. How much does the octopus wolfi weigh?

The octopus wolfi weighs less than a paperclip.

Octopuses

What Do Octopuses Look Like?

Octopuses are sea creatures with six arms, two legs and a large head. They have a sharp beak like a parrot near to where their arms join. They have hundreds of suckers on each of their arms and legs which help them to touch and taste. Octopuses are great at hiding. They can change the colour of their skin to talk to other octopuses, to hide and to hunt.

Did You Know...?

The octopus wolffii weighs less than a paperclip!

Octopuses are very unusual. They have three hearts, blue blood and nine brains. They have one large brain in their head and eight smaller ones in each arm and leg. This means that they can do lots of different things at the same time.

Where Do Octopuses Live?

Octopuses live in all of the world's oceans. They are invertebrates which means they don't have a backbone. Some octopuses live in coral reefs and squeeze themselves into tiny gaps. Other octopuses live in underwater caves near the bottom of the ocean. Some use their strong arms to build their own dens out of rocks. Some even give their dens a rock door that they can pull closed behind them. They like to live and hunt on their own.

Did You Know...?

All octopuses are venomous but the blue-ringed octopus is the only one that is deadly to humans.

What Do Octopuses Eat?

Octopuses are carnivores. This means they only eat meat. They like to sneak up on their prey and then pounce. They wrap it in their six arms and bite it with their strong, venomous beak. Octopuses eat crabs, shrimp and clams. Some larger octopuses eat birds or sharks.

How Do They Protect Themselves?

Octopuses protect themselves by hiding from predators.

They change the colour and texture of their skin to camouflage with the area around them.

They can even lose an arm if a predator catches them as their arms grow back.

They shoot a dark liquid called ink at their predators if they get scared. Then, they can quickly escape.
